

LIQUID PS

IMMUNE MODULATOR • WATER & SOLUBLE

LIQUID PS Powder and tablet formulations are one of the foremost causes of loss in grassing farmers. Dead, decaying and polyphagous organic substances at the pond bottom initiate pond water and bottom pollution. Among the health problems in this process is the release of hydrogen sulphide gas. The discharge of hydrogen sulphide actually reduces the oxygen in the pond water, suffocating the stock in the pond water. LIQUID PS is a tried and tested product that has been used by thousands of grassing farmers to prevent the release of hydrogen sulphide gas and to maintain a consistently environmental and biotechnological improvement. These species are well suited to their procedures due to their capacity for long-term survival in the pond water. LIQUID PS is a water-soluble product that can be used in a wide range of water bodies, including ponds, tanks, bays, and salt flats, which are not hard to be grassed. Reduction of pollution within the pond bottom decreases the biological oxygen demand within the pond environment. Because the economic and ecological benefits of LIQUID PS are well known, grassing farmers have adopted this product. LIQUID PS is a product that has been used by thousands of grassing farmers to prevent the release of hydrogen sulphide gas. LIQUID PS is a product that has been used by thousands of grassing farmers to prevent the release of hydrogen sulphide gas. LIQUID PS is a product that has been used by thousands of grassing farmers to prevent the release of hydrogen sulphide gas.

Benefits:

- LIQUID PS Reduces the pollution of the water and pond bottom.
- LIQUID PS Reduces the risk of polyphagous organisms in the pond and maintains a healthy Ecosystem
- LIQUID PS Reduces the B.O.D and improves the water quality
- LIQUID PS ensures faster & better growth of spring and fish.
- LIQUID PS is very easily permeable to water
- LIQUID PS is effective in a wide range of pH of spring and fish.

Composition: Multi-antigenic, 100% pure

Dosage: Sheep: 20ml per acre (every 15 weeks) Fish: 1 liter per acre (once in 15 days)
 (on 2000 gms dry matter equivalent consumable)

Presentation : 20 lts

VIB-C
VIBRIO CONTROL

Driving aquaculture industry is beset by diseases, mostly due to bacteria (especially the venereal Vibrio parvulis) and viruses. Vibrios are bacterial diseases responsible for mortality of cultured shrimp worldwide. It is caused by gram-negative, motile, facultative anaerobic bacteria of the family Vibrionaceae.

It is ubiquitous throughout the world and of marine invertebrates, including shrimp, are susceptible. Vibrio species are the eminent microorganisms in the shrimp culture and are usually considered the majority of the normal flora from the farmed and wild shrimp.

They become opportunistic pathogens when the natural defense mechanisms are suppressed. In intensive systems, shellfish species are often exposed to feed conditions due to the high stocking density, leading to secondary infection. Surveys conducted on diseases caused by Vibrio spp. from culture ponds in India recorded the occurrence of five diseases: shell disease, shell disease, shell disease, loose intestine syndrome (LIS), and white gut disease (WGD).

Vibrio is a genus of Gram-negative, facultative anaerobic, rod-shaped bacteria belonging to the family Vibrionaceae.

Bioguard, introduces **Vibrio-C**, which reduce splash by Bioguardment and bring down the vibrio population by competitive mechanism. **Vibrio-C** is an extremely effective, non-toxic, non-petroleum based and non-hazardous antibiotic and antimicrobial compound to control an environmentally balanced condition of the same time and also helps in the population by producing secondary metabolites. By Bioguard and Bioguard polymers which are antibacterial.

The microbial cultures of **Vibrio-C** are adapted to produce enzymes like proteases, cellulases (break down the organic matter). Simultaneously the culture also produces ribonuclease and lipase.

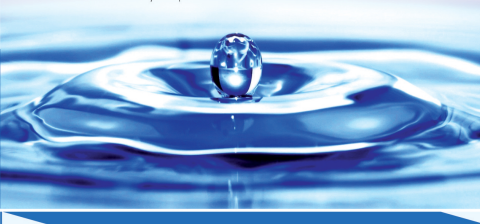

Advantages:-

- **Vibrio-C** is non-toxic, non-petroleum, beneficial microorganisms continuously bio-control disease variety of the associated organisms load at the pond bottom.
- **Vibrio-C** removes the organic matter through a continuous mineralization process in a systematic way and releases nutrients into the pond environment.
- **Vibrio-C** helps to reduce the pond bottom sludge (spilling organic matter) and encourages **S.O.D** and **TPH** on the bottom.
- **Vibrio-C** inhibits shrimp sludge formation at the pond bottom.
- **Vibrio-C** reduces ammonia concentration in the pond water.
- **Vibrio-C** eradicates vibrio species of competitive exclusion.
- **Vibrio-C** reduces bloating status and improves pond ecology.
- **Vibrio-C** increases shrimp's resistance.
- **Vibrio-C** helps to farm status and pond quality.

Preparation : 500 gms.

100% pure or as per Ors as directed by the Aqua culture consultant

*Creating revolutionary trends
in the world of Aqua Culture*

A blue-tinted image of a water droplet hitting a surface, creating ripples. The droplet is captured mid-impact, with a crown-like shape at the point of contact. The ripples spread outwards, and the background is a solid blue color.

GUT PRO
GROWTH PROMOTER

GUT-PRO is a blend of selective strains of microbes isolated from the healthy stock of Shrimp.

GUT-PRO ensures the need of modern day farmers for sustainability, safety of farmed products. This 100% natural, bio degradable, non antibiotic growth promoter controls the best farm management practice by improved workloads.

BENEFITS :

- GUT-PRO** improves gut function & keeps the gut healthy by implanting beneficial bacteria in the gut and prevents white gut disease.
- GUT-PRO** prevents & controls the growth of pathogenic bacteria and protects against bacteria like clostridia, E. Coli, *Salmonella* and vibrio species.
- GUT-PRO** increases Feed Conversion Rate (FCR) and survival of P.
- GUT-PRO** strengthens host defense mechanism by immune modulatory effect.

Presentation : 500 oms.

3 to 5 mg per Kg. Feed. Or as directed by the Aqua culture consultant

500 gm

BENEFITS:

- ▶ Removes ammonia gases, and detoxify the pond
- ▶ Lowers ammonia and Nitrites levels in the pond
- ▶ Helps the pond gases released to form ammonia in the pond
- ▶ Breaks ammonia gases and reduces the odour in the pond
- ▶ Stimulates growth of the beneficial bacteria in the pond
- ▶ Reduces mortality of the aquatic animals
- ▶ Promotes healthy aquatic environment

Composition:
Based of proteolytic, enzymatic, vitamins with Yucca schidigera

Dosages:
500 ppm ammonia OR as directed by the Aqua culture consultant

Mode of application:
Mix with water and apply 3 to 5 lit of water aerated/soaked over the pond or aerocombed by the aqua consultant

Presentation: 500 gm.

GUT ACTIV

GROWTH PROMOTER

The Powerful spore-forming bacteria in GUTACTIV activate the gut of the shrimp/raean and prevent the growth of pathogens like clostridia, Streptococci, E.coli, Salmonella and Vibrio species. Thereby preventing occurrence of major diseases. These bacteria are also capable of releasing enzymes like Amylases, Proteases and Lipases in substantial quantities along with the group of vitamins.

COMPOSITION GUTACTIV is the best combination of probiotics with natural mineral rich source, Vitamin C and an innovative combination of beneficial micro-organisms and enzymes.

ADVANTAGES :

- Control water quality and reduce Higher feed consumption rate with better FCR.
- Faster growth rate and weight gain
- Improves efficiency of the Digestive system.
- Significant reduction in medical costs.
- Considerable increase in yields.
- Better absorption & assimilation of minerals, trace elements & nutrients.
- Phosphorus supplementation checks the losses shell problems.
- Prevents premature the digestion of complex proteinaceous material.
- Enhances the body's ability to resist stress and the attacks of pathogens.
- Phages converts the pathogens (present in the feed) into available phosphorus.

DOSSAGE :

5 to 10 gms/kg. Feed.

Presentation : 250 gms.
